

# Carl MacKinnon Joins Infrastructure Networks Leadership

Houston, Texas, United States, March 14, 2014

Infrastructure Networks, Inc, a Houston, Texas-based provider of broadband wireless networks to oil and gas and other critical infrastructure industries, has announced the addition of Carl MacKinnon as Executive Vice President of Sales and Marketing.

Carl MacKinnon brings more than 25 years of experience in the industrial telecommunications industry to his role as Executive Vice President of Sales and Marketing for Infrastructure Networks. Throughout his career, Carl has held sales leadership roles and led teams in key vertical markets including Oil & Gas, Electric Utility and Public Safety. His extensive experience and leadership in the communications industry has directly resulted in significant sales and revenue growth in technology businesses.

Before joining Infrastructure Networks, Carl was Vice President of Worldwide Sales for Redline Communications. Prior to that, he had served as Global Sales Leader for GE Digital Energy's industrial communications division. Before joining GE, Carl was Director of Sales for MDS.

"We are extremely excited to have Carl join our team," stated Infrastructure Networks CEO Stan Hughey. "His extensive experience and proven leadership in industrial telecommunications sales will have an immediate impact on our revenues and growth."

Carl holds a Bachelor's Degree in Sales and Marketing, and has made numerous contributions to the industrial wireless industry, including serving as a board member of The Energy Telecommunications and Electrical Association (ENTELEC).

"I am thrilled to join Infrastructure Networks. I was already very impressed with what they have accomplished, building a world class Virtual Private Radio Network," said MacKinnon. "The demand for real-time data is increasing in many markets, especially in Oil and Gas, and the solutions that Infrastructure Networks provide will ensure companies meet their current and future objectives."

Founded in March of 2011, Infrastructure Networks provides next-generation wireless broadband communications founded on 4G / LTE wireless technology, exclusively to Critical Infrastructure entities. Since its founding, the company has been rapidly expanding its holdings by acquiring licensed 700 MHz, AWS, and BRS / EBS broadband spectrum. To date those holdings cover more than 160,000 square miles of the Bakken Shale in North Dakota, the Niobrara Shale in Colorado, the Eagle Ford Shale and Permian Basin in Texas, as well as the Texas Panhandle and parts of eastern New Mexico, and in Kern County, California.
